bacteria

**Results of mechanical tests according to EN 388:2016:**

Abrasion resistance	Performance level 3
Cut resistance	Performance level 1
Tearing resistance	Performance level 0
Penetration force	Performance level 1
Cut resistance acc. to EN ISO 13997	Performance level X
Impact protection acc. to EN 13594:2015	Performance level -

Please take care about the manufacturer's information

Expiry date YYYY-MM

See information on the polybag

**Tests completed by:** Please see following conformity declaration

**Cleaning and care:** New and used gloves should be checked thoroughly for damage before use and after cleaning in particular. Dirt on the gloves should initially be either brushed or wiped away; the glove should then be washed with mild soap suds, rinsed in clean water and dried by air only. In case of critical contamination of the gloves, contact with the skin should be avoided. The appraisal with the above performance levels is based on tests completed on unused gloves. The transfer of the results to gloves subsequent to care treatment requires the completion of appropriate tests.

**Packaging and storage:** The gloves are connected with a bag, header card and/or yarn and have one consumer information tag for each pair or dozen. The work gloves are bundled together and packaged in corrugated cartons. The additional packaging is suitable for storage and transport. Can be used in the original package until the printed expiration date.

**General Information:** Particular care is required when working with turning components (risk of catching and pulling). This user information is designed to provide assistance with your choice of protective equipment, whereby the laboratory tests offer assistance with your choice but are not able to assess the actual working conditions. The user, and not the manufacturer, is responsible for ascertaining the suitability of a specific glove for the planned area of use.

**Disposal:** Used gloves may be contaminated with polluting or hazardous substances. Disposal of the gloves must be carried out in accordance with the locally applicable legal standards.

**Health risks:** Gloves can contain potentially allergenic substances. If an allergic reaction occurs, consult a doctor or dermatologist.
